**TEAM Innovations introduces the  
ClassicTrode-Monitoring ECG Electrode**

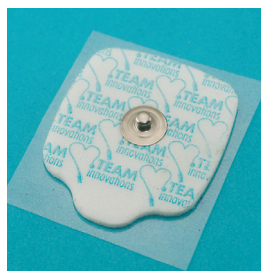

## ClassicTrode-Monitoring

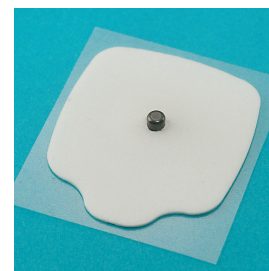

Team Innovations offers multiple variations of traditional snap ECG electrodes with the ClassicTrode series. The ClassicTrode Monitoring is a solid gel, long term ECG electrode.

The ClassicTrode-Monitoring series of ECG electrodes are available in two lead wire connection configurations:

- **Stainless Steel Snap**
- **Radio translucent sensing element**

ClassicTrode Monitoring  
with Stainless Steel Snap

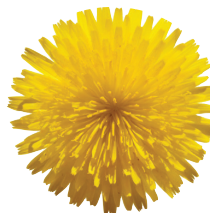

ClassicTrode Monitoring  
with Radio Translucent  
Sensing Element

Both ClassicTrode Monitoring models offer:

- **Medical grade foam or white spunwoven, soft and pliable backing material**
- **Central hydrogel pad**
- **Perimeter acrylic adhesive**
- **Silver/Silver Chloride sensor**
- **Low impedance**

The ClassicTrode Monitoring is available in two backing materials, multiple size and geometric shapes to fit any ECG electrode application. The 1-1/2" x 1-1/2" (38 mm x 38 mm) rectangular foam backing material configuration (pictured here) is ideally suited for adult use. Contact Team Innovations for your specific requirements.
